Assignment-1:

What to build?
One page dashboard application for named "DARK EYE" that reports data leaks of any form for any organization.

What to build on?
React app is preferred, you may use html,css,bootstrap ond any javascript library you find good.

What we expect?
We expect design/development should be appealing as if "cyber crime is prevented"
It should be eye catching, you can dramatize it, we dont mind :)

Code standards?
We dont expect much but try avoiding too much duplication

Functionalities?
Must have some input/output. Something to start/stop on click. Something that might update the data or styling with time/or clocks.

Theme?
As its dark eye we encourage dark theme but anything new can also be pitched.

Where to host?
Not compulsory, you an share git code or screenshot of your dashboard and show us in your system while we discuss in next round.
